Psychiatric Referral Services

Christie Campus Health has partnered with FasPsych to provide Virtual Psychiatric Prescribing Clinics as part of the work with the USG Mental Health Initiative. These Virtual Prescribing Clinics will include a pool of providers delivering psychiatric assessment and medication management services via a secure telemedicine behavioral health platform, with an e-prescribing, electronic medical record component.

To get started, students need to get a referral from the ABAC Counseling Center. That number is 229-391-5135 or counseling@abac.edu. Once an initial visit is scheduled, students will receive an intake assessment and any additional services as needed or requested.

As each student registered is seen by a provider, that student will be introduced to the online patient portal to easily schedule additional appointments.

Follow-ups are at the provider's discretion to re-schedule if they continue care with the student seen. If the provider deems the student needs additional support services or a different treatment approach, the provider will coordinate with internal schedulers to ensure the proper handoff takes place.

FasPsych takes a hands-on approach to student scheduling and transition in the first 30 days of implementation to ensure the student is fully comfortable with the process.
